Handycoat[®]

Exterior

Exterior ready-mixed thin coat filler

A ready-to-use filler for use on all common building surfaces, including gypsum board, concrete and timber. It gives a high quality, even surface for painting. Handycoat Exterior is specially manufactured for the painter to repair and touch up exterior and interior surfaces, both new and old, prior to painting.

It is designed as a thin coat filler, for filling joints, hairline cracks etc. by hand application. Unlike conventional fillers, Handycoat Exterior creates a crack resistant joint, is permanent and retains its adhesion.

Benefits

Handycoat Exterior is a quick drying, flexible ready-mixed paste formulated using acrylic binders and precisely graded white marble powder, ensuring that the product is tough, durable and crack resistant.

Areas of use

Handycoat Exterior is suitable for interior and exterior surfaces. When dry, Handycoat Exterior is weather resistant and bonds extremely well to cementitious materials, gypsum, building boards, sprayplaster, wood, galvanised and anti-rust primed steel surfaces.

It is also used as a thin coat filler for patching hairline cracks in walls and ceiling soffits. Handycoat Exterior is suited to repair damaged plasterwork, paintwork, filling holes and defects in woodwork, making good exposed concrete, and filling dents in galvanised and anti-rust primed metal.

Also used as a crack resistant jointing compound for building boards.

Product Information

Pack size:	5kg and 25kg
Consumption rates:	0.5 - 1.5 kg/m ²
Layer thickness:	Maximum 1mm per layer
Dilution:	Up to 5% with water if required
Colour:	Natural white
Application method:	Trowel
